

Instructions for the downloading of PDF files

You can open a PDF file in your Internet browser when you click the link of the PDF file with the mouse. You need the Acrobat Reader program to be able to read PDF files. If your computer does not have either one of these, you can download the Acrobat program on your computer free of charge from: <http://www.adobe.fi/products/acrobat/readstep2.html>

Problems in downloading a PDF file?

If a PDF file does not open in your Internet Explorer browser, try the following:

- 1. Close Internet Explorer.**
- 2. Open Acrobat Reader in your computer.**
- 3. If you have Acrobat Reader 4.x version, choose File > Preferences > General, and remove the selection from Browser Integration. In Acrobat 5.x version, choose Edit > Preferences > General, go to the Options menu and selection Display PDF in Browser from the menu.**
- 4. Press OK and leave Acrobat Reader.**
- 5. Open Internet Explorer again.**

Note: The next time you open a link for a PDF file, your browser may ask whether you want to open the file from its present location or whether you want to save the file on the hard disk of your computer. If you choose to open the file from its present location, open the file. If you choose to save the file on the hard disk, the browser will download the file to your hard disk to a directory.

Alternatively, you can open a PDF file by downloading it to your hard disk as follows:

- 1. Click the right-hand side button of the mouse on the link of the PDF file. In the appearing menu, choose item Save As).**
- 2. Choose a directory in your hard disk into which you want to save the file and click OK (Save).**
- 3. Open the saved file from your hard disk by using the Acrobat or Acrobat Reader program.**

Further information on the Acrobat Reader program and PDF files is available at: <http://www.adobe.fi/products/acrobat/readstep2.html>
